I would really appreciate some help on this, as I am not sure how to approach this... I am using Windows 7 if that matters... A: You can perform the following steps to achieve your desired results: Download and install the TextRead plugin for Notepad++. Go to Tools menu, TextRead, Open plugin manager. From the drop-down menu, select TextRead, and click Install. After installing the plugin, you should see a new icon under the TextRead menu, like this one: Q: How to find out where an interface is implemented? Is there a way to find out where a class or an interface is defined? Of course, I can look at the code in the .cs files of the project that contains the class or the interface, but I was wondering if there is a solution using tools of Visual Studio (or any other IDE), because I sometimes add interfaces while the project is open (so I can't really open the source code in the editor, because VS2010 crashes because I'm having 50 editors open and two DDs). A: Is there a way to find out where an interface is implemented? Sure. Right click on the .cs file in solution explorer and select "Go to Implementation" A: If you are using the Visual Studio 2010 you can bring up the IntelliSense window for a member by right clicking the member name and selecting "Go To Definition" A: In addition to going to the implementation, you can also use "Find All References". That will show any classes that the interface is referenced. Main menu Streaming Audio for Android For me, the best part of streaming is being able to follow along with a soundtrack while I'm working. I love the way a pair of headphones allows me to attend to my work with complete concentration and let the world around me fade away. On the Android platform, there are some features that make it easy to create a great streaming solution. 1. Equaliser Because your audio files will most likely be encoded at lower bitrate, it's a good idea to turn up your volume and raise the EQ a bit. I'm a fan of flat EQ with a little boost for the midrange. 2. Cancellation of effects EQ can be used to cancel ambient f678ea9f9e
